

Language Learner Program

Free, open-source, unlimited translator and note
taker app

Made by Vasif Asadov

Do you want to learn new words and sentences?

- Beginners need to increase their vocabulary in their targeted language to grasp the grammar and communicate in that language.
- However, most of the apps demand subscription or money to let you take unlimited notes and translations.
- Google Translate is a good source to translate words and sentences in your desired language. But, it requires manual note taking - you should copy your translations and paste them into note-taking app. That require manual work which take extra time.

LANGUAGE LEARNER app WILL TRANSLATE YOUR
SENTENCES IN ANY LANGUAGE and EXPORT YOUR NOTES
AS PDF FILE

Installation

- The app is available in Windows and Linux
- Download Windows .exe file from the link below:

<https://github.com/vasif-asadov1/language-learner/releases>

- Download Linux binary file from the link below:

<https://github.com/vasif-asadov1/language-learner/releases>

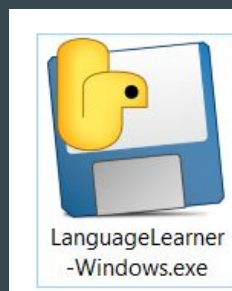

- The whole installation and usage guidance is given in the following slides

Installation on Windows

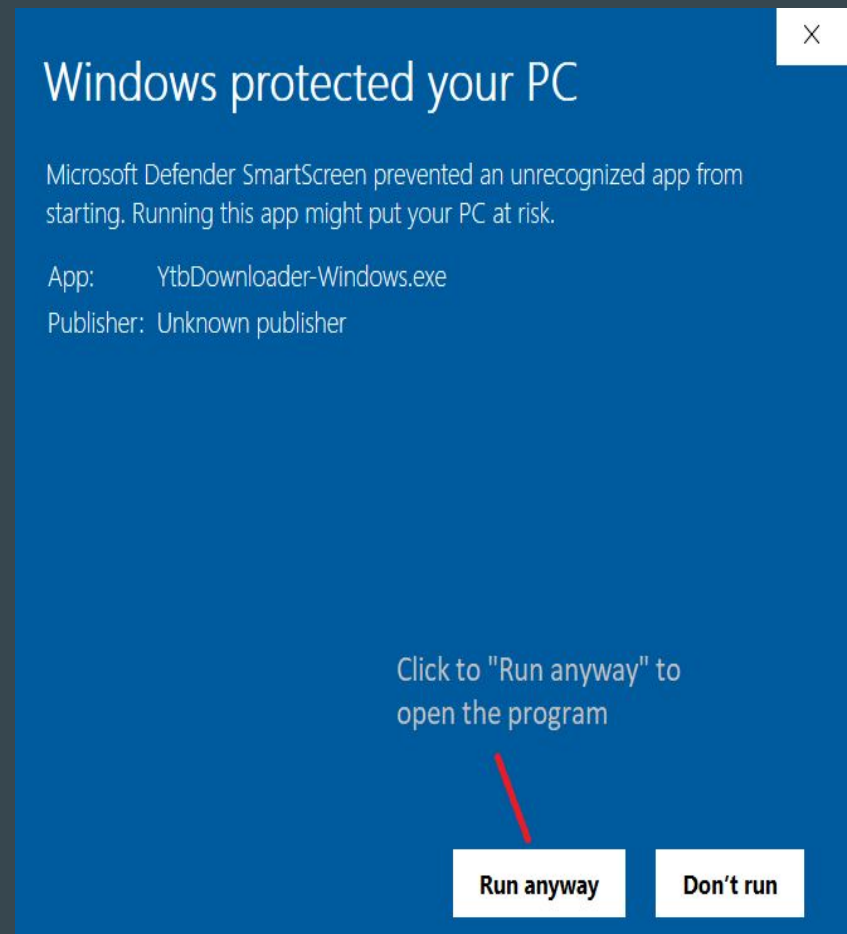

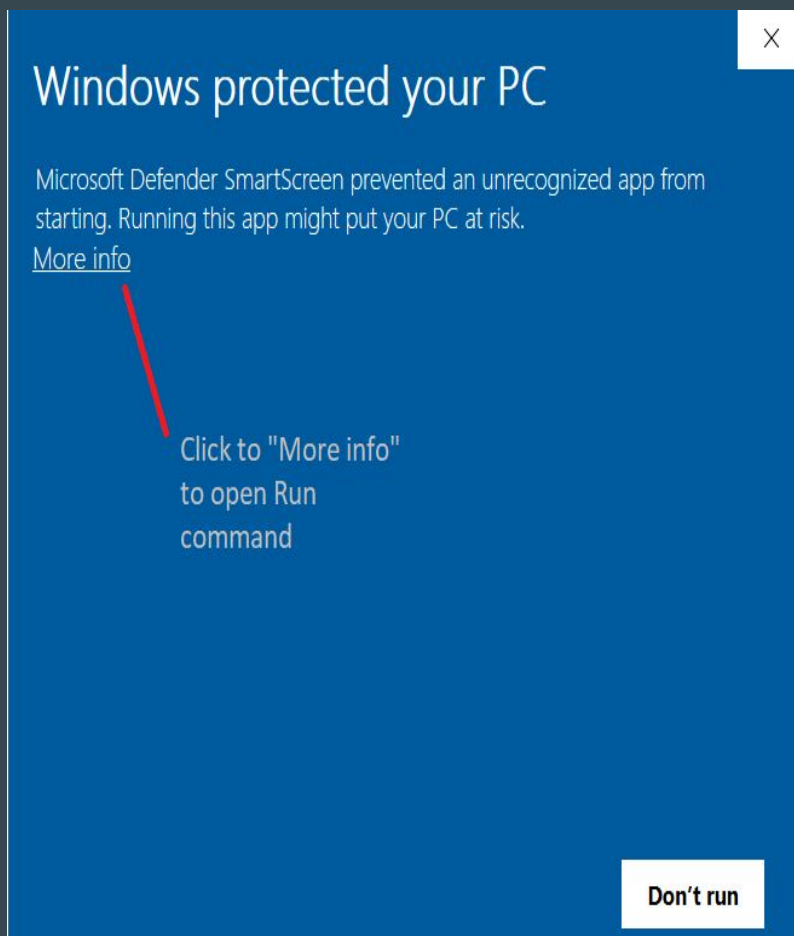

- Go to the following link and install the .exe file from the latest release:

<https://github.com/vasif-asadov1/language-learner/releases>

- After completing the download process, double click to the .exe file installed in your local.

Installation on Windows

Installation on Linux

- Follow the link below and download Linux file:

<https://github.com/vasif-asadov1/language-learner/releases>

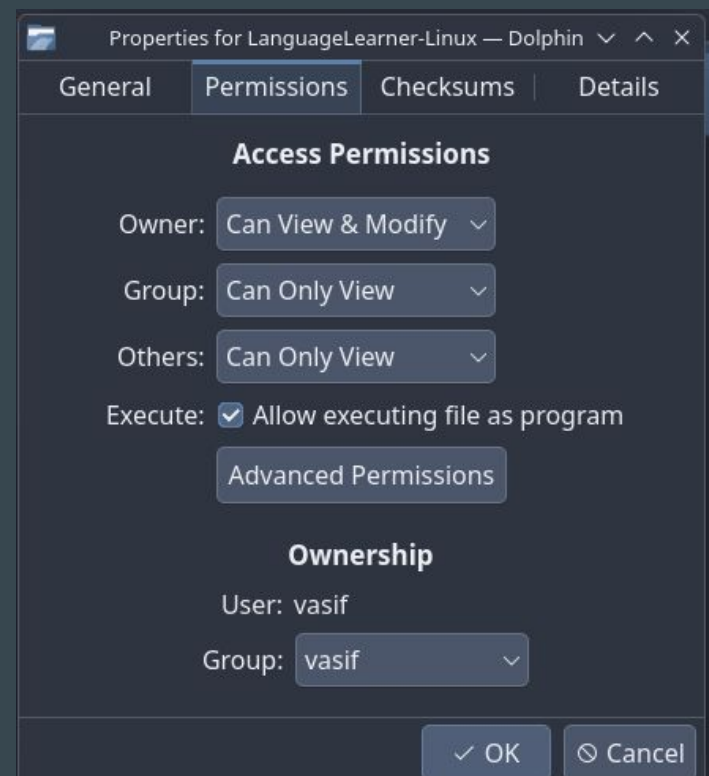

- Make the file executable via terminal:

```
cd ~/Downloads
```

```
chmod +x LanguageLearner-Linux
```

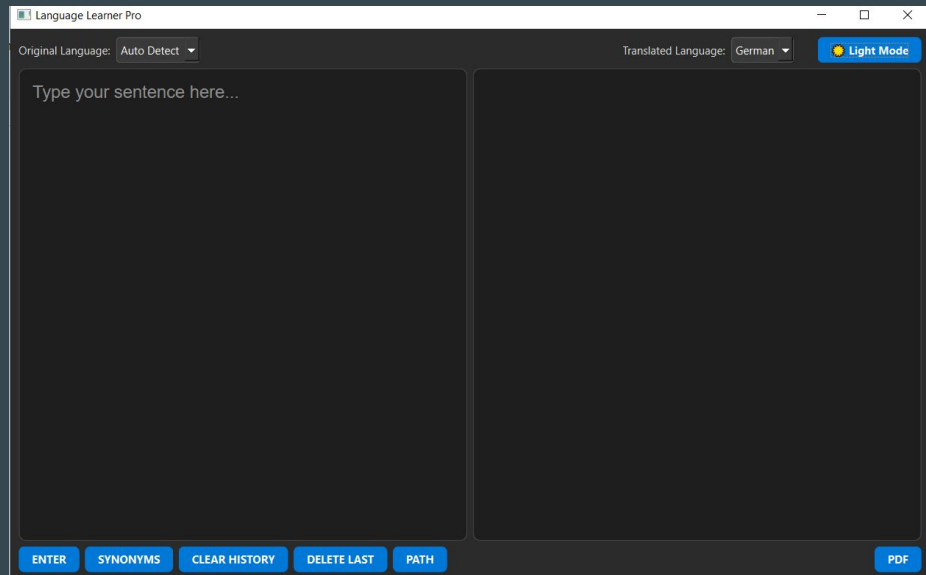

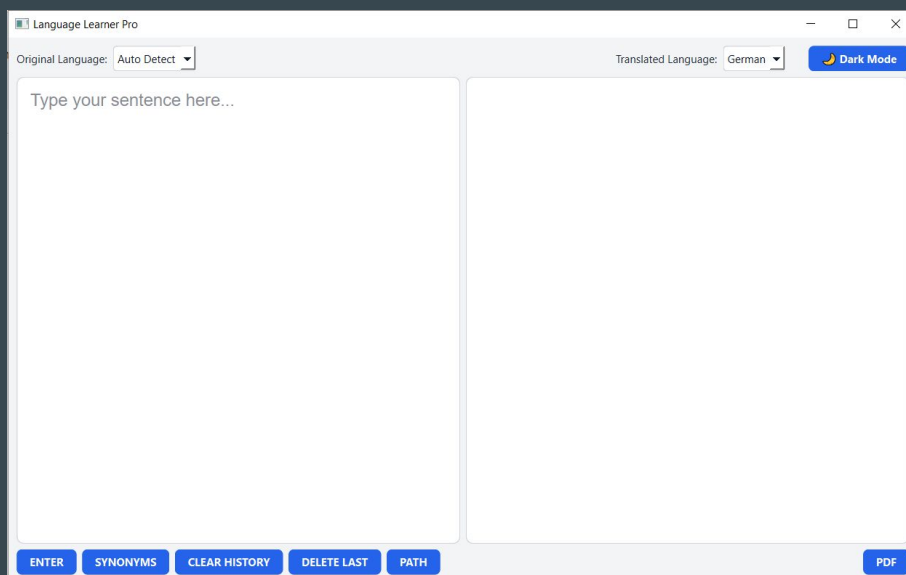

or in the properties menu,
check the executable file box.

- After that, launch the file
and use it.

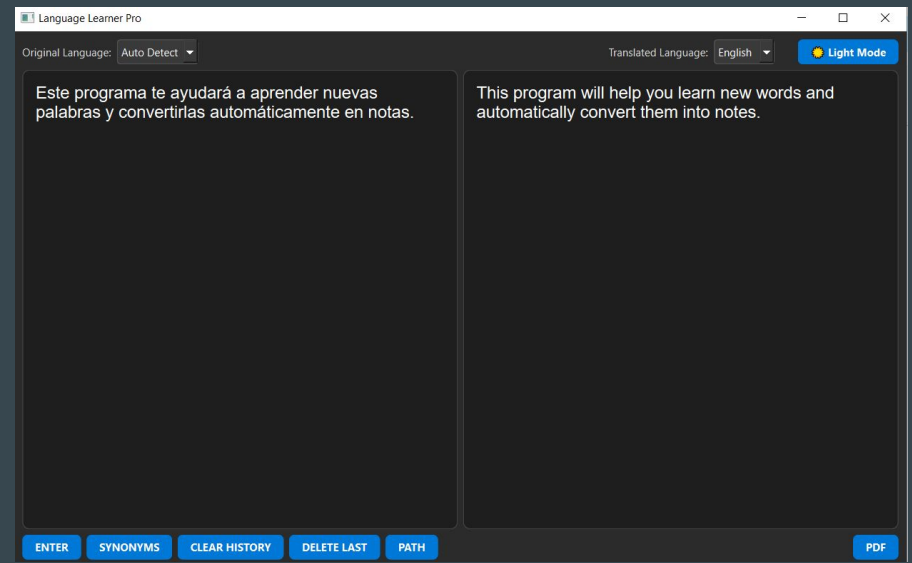

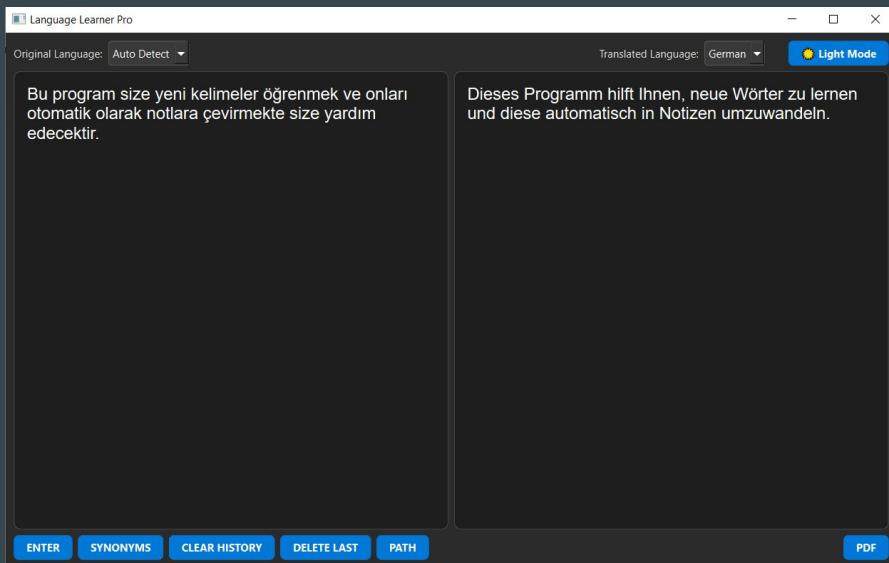

Theme Switcher

The app has light and dark modes available. You can switch it by clicking to Dark Mode (or Light Mode) button

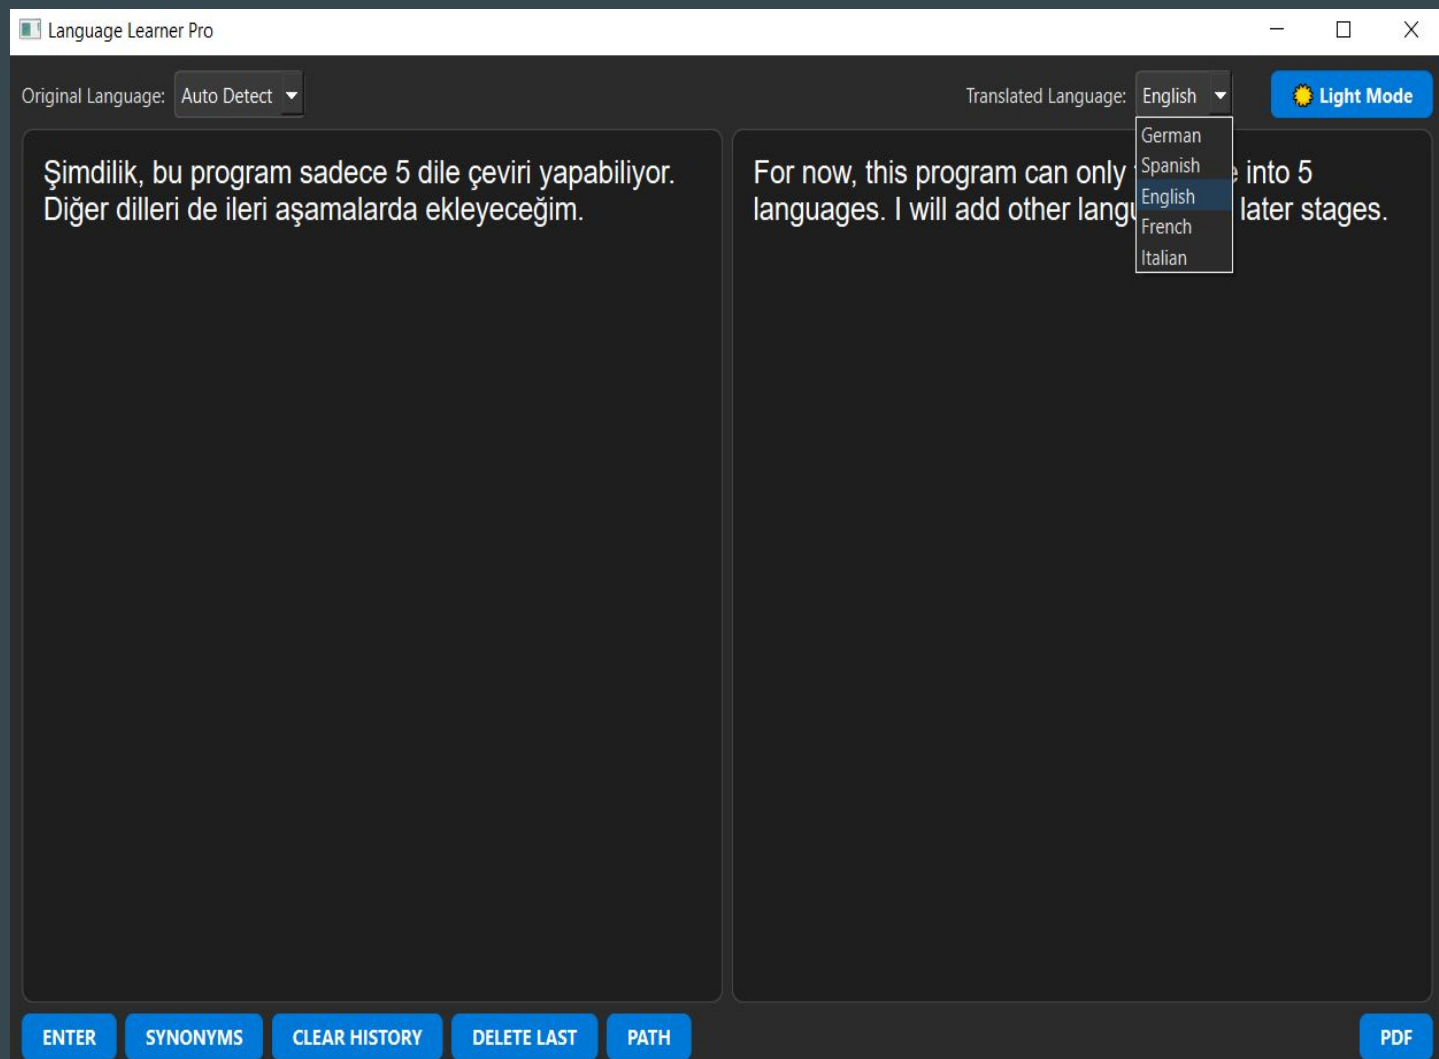

Any language is accepted

You can type in any language. “Auto-detect” mode will understand your language and make the translations. To translate your sentences, either click to **ENTER** button, or press **Shift+Enter** shortcut keys.

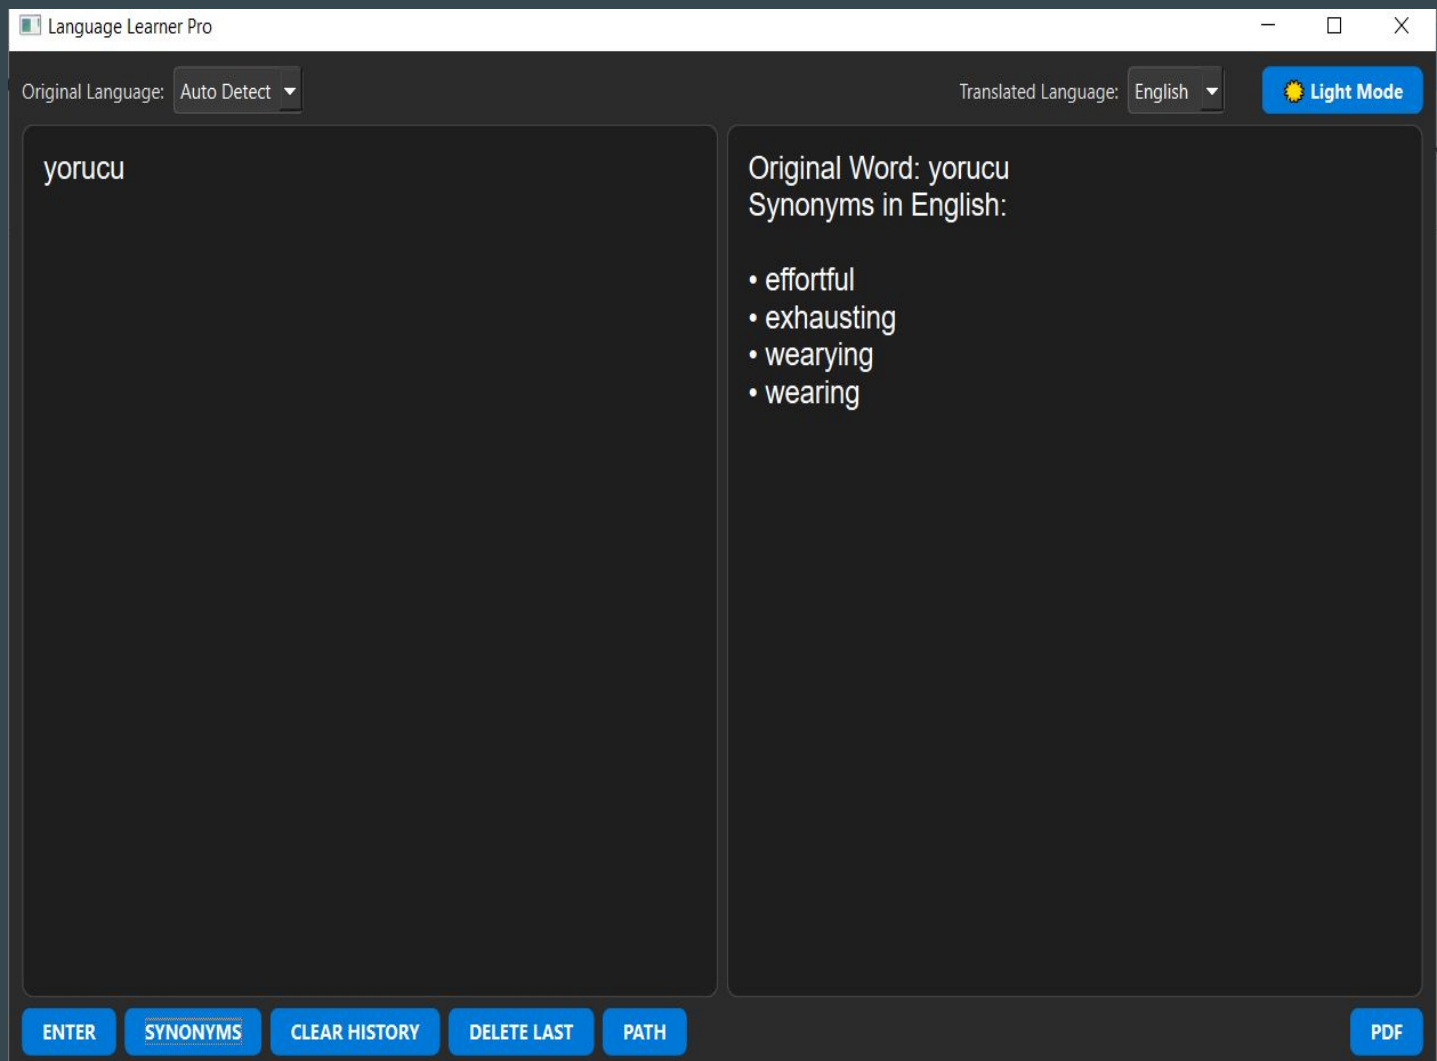

5 Languages are available for now

Currently, translations are done into these 5 languages: English, German, Spanish, French and Italian. All languages will be added in the next releases.

Synonyms included

You can write single words and then click to SYNONYMS button. It will list several synonyms of the word in your target language.

Export to PDF

After translating your words and sentences, you can export them as pdf by clicking to **PDF** button or by pressing **Ctrl+Shift+E** shortcut keys. It will create pdf with the name of timestamp that pdf is generated.

Language Learning Notes

2026-06-14

1. Bu program size yeni kelimeler öğrenmek ve onları otomatik olarak notlara çevirmekte size yardım edecektir.

Dieses Programm hilft Ihnen, neue Wörter zu lernen und diese automatisch in Notizen umzuwandeln.

2. Bu program size yeni kelimeler öğrenmek ve onları otomatik olarak notlara çevirmekte size yardım edecektir.

Este programa te ayudará a aprender nuevas palabras y convertirlas automáticamente en notas.

3. Este programa te ayudará a aprender nuevas palabras y convertirlas automáticamente en notas.

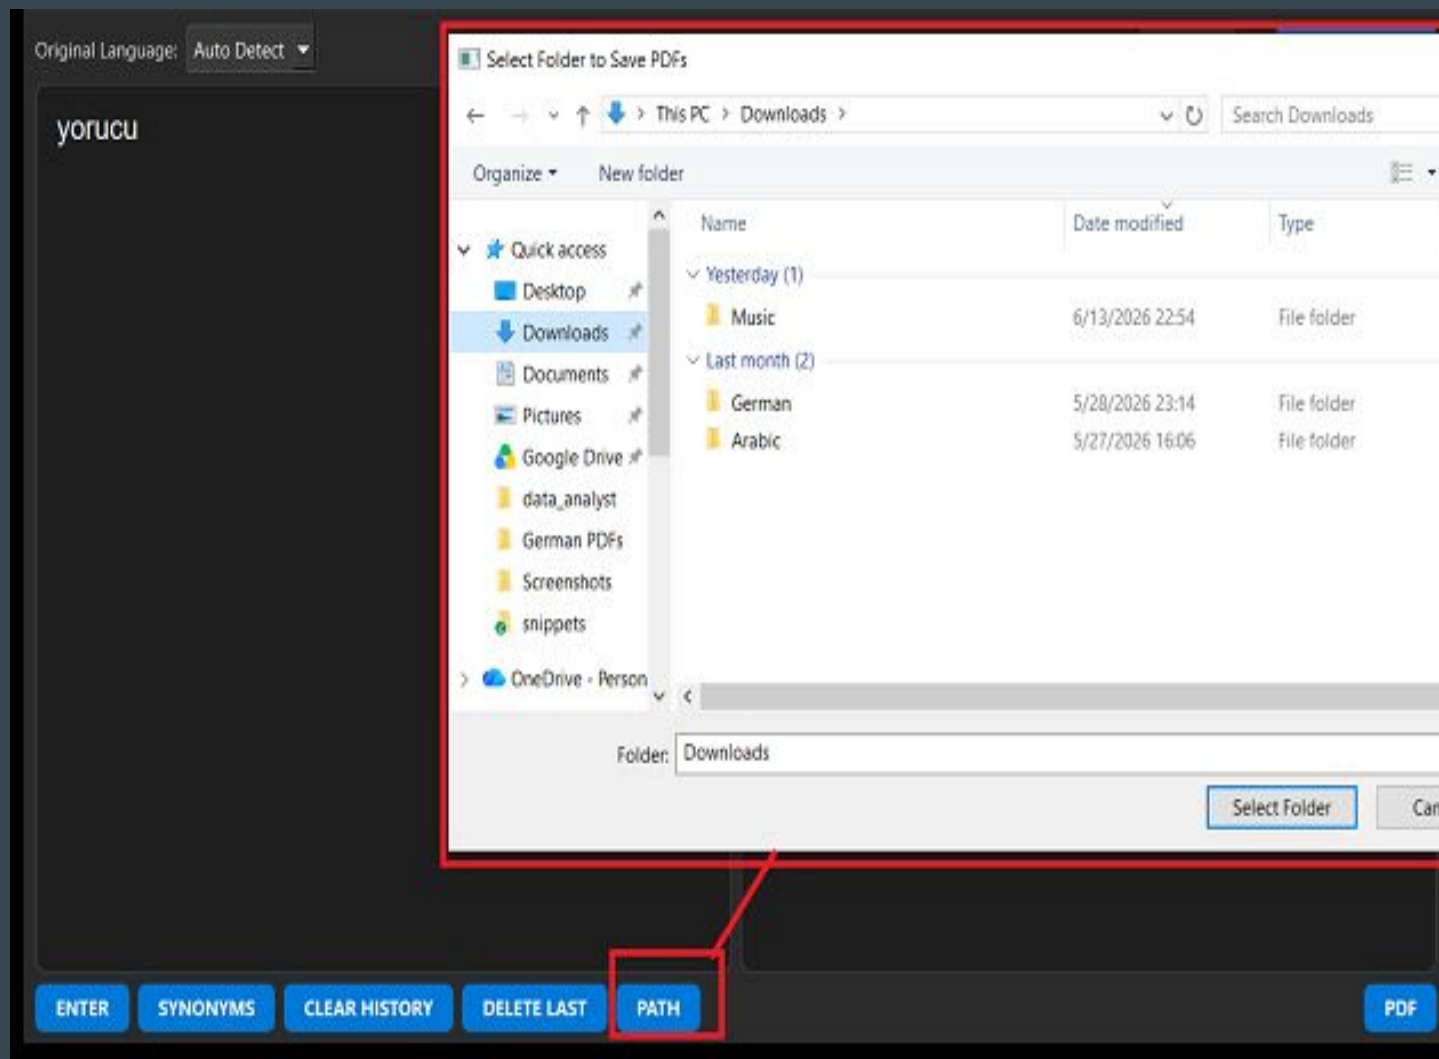

This program will help you learn new words and automatically convert them into notes.

4. Şimdilik, bu program sadece 5 dile çeviri yapabiliyor. Diğer dilleri de ileri aşamalarda ekleyeceğim.

For now, this program can only translate into 5 languages. I will add other languages in later stages.

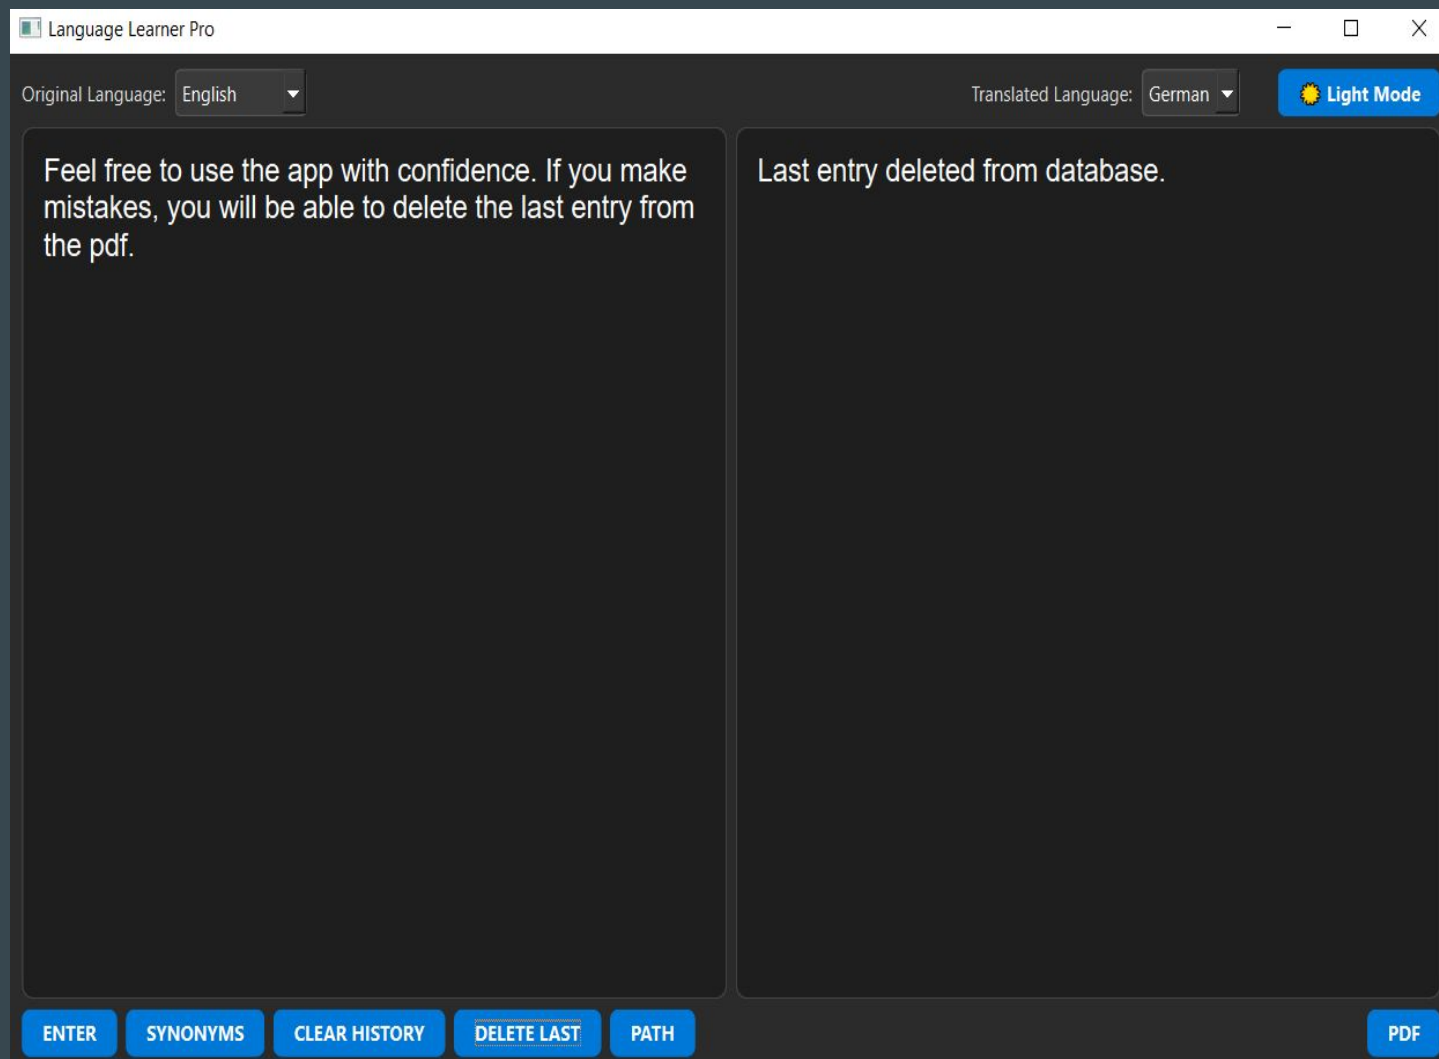

Dynamic Path - Clean Structure

You can change the path to which the pdf files are exported by clicking **PATH** button in the app.

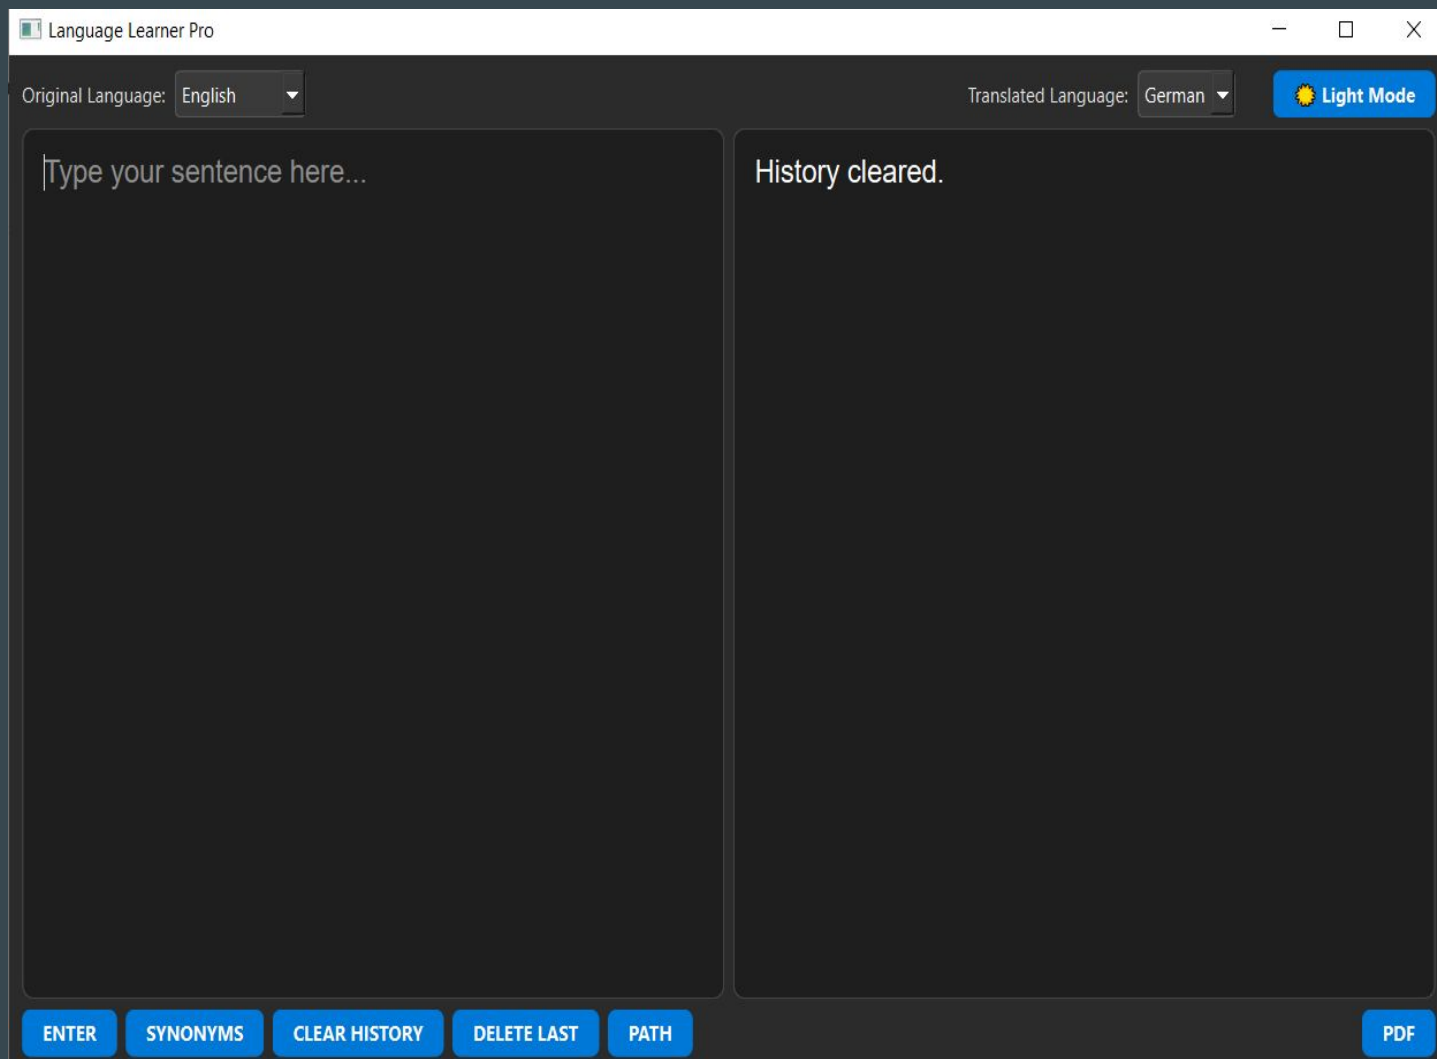

Delete Last Entry

If you made mistake and entered wrong word or sentence, you can delete it from the pdf by clicking **DELETE LAST** button.

Delete All History

If you want to delete all entries from the pdf file, click to **CLEAR HISTORY** button. It will delete all entries in the pdf.

Shortcuts

You can use buttons or shortcuts to do operations.

Action	Shortcut	Description
Translate	Shift + Enter	Instantly translates the current input block.
New Line	Enter	Drops to a new line inside the input box for longer texts.
Export PDF	Ctrl + Shift + E	Immediately compiles the current session into a saved PDF.

Considerations

- Open-source app with unlimited translations and pdf exports.
- The app will cover translations to most of the languages in the near future.
- Use it, share and give feedbacks.
